

Fold-away lift for trucks with trailer coupling

DHOLLANDIA

For truck-trailer combinations with draw bar

The fold-away lift DH-RMV.20 is derived from the DH-RM.20, and is specially adapted to suit **trucks with a draw-bar coupling** (for central-axle trailers).

- The lift frame is custom made in function of the chassis and coupling dimensions [option OAU008].
- The lift is equipped with an articulated bumper, that can be lowered to legal bumper height when the truck drives solo, and can be lifted out of way when the trailer is attached. The DH-RMV allows the operator to load and unload the truck without uncoupling the trailer.

The bumper features integrated boxes for the rear truck lights and the license number plate.
